Empty .dbf files
Posted by marnen - 2009/02/15 14:50

_____

Hello to everybody,

I'm having the problem running the SWAT simulations even with San Pedro tutorial 1 data. My .dbf files are empty. I've tried with different CSA values and it didn't work.

What seems to be the problem? I'm running AGWA with ArcGIS 9.3.

Is there a way to populate dbf files manually from .txt files, output file or any other file generated in simulations folder?

Please help!

Best regards,

Nesha

_____

Are you having trouble with both the SWAT and KINEROS portions of the tutorial? If the DBF files are empty, the most likely reason is that the model crashed when it was run. Can you try running the model from the command prompt so you can see if any errors occured?

You can use the search function to find a few posts on the forum which describe how to do that. Here is one.
